Solutions in the field of WATER SUPPLY,  
AGRICULTURE, GARDEN & TURF IRRIGATION, and  
TELECOMMUNICATION

## WHO WE ARE?

Poliext is a family-owned PRODUCTION COMPANY located in HUNGARY, offering a suitable solution in the field of CONSTRUCTION, WATER SUPPLY & IRRIGATION. Poliext was ESTABLISHED IN 1991 and has more than 30 YEARS HISTORY. During these years our company has been recognized for quality products.

## HISTORY

Our history begins in 1919, with the foundation of the Skala family's first private business. The founder of the company was MR. MIHALJ SKALA.

In the year 1991, MR. ZOLTAN SKALA established the company Poliext Csövek Kft. in Hungary. The production started on a 1300 m<sup>2</sup> area, with three extruder machines and eight employees.

## QUALITY

Our quality management system is certified by ISO 9001, and our products by several European certifications (DVGW, KIWA, ÉMI, ITC, ACS, etc.)

## SALES NETWORK

We provide high-quality water-saving solutions worldwide. Today Poliext exports to 30 COUNTRIES, on 4 CONTINENTS with more than 1000 REGULAR CUSTOMERS.

## OUR PRODUCTS

Besides PE PIPES, our specialty, PP COMPRESSION FITTINGS PN16 are our most important and well-known products. High-quality, massive fitting with NO quality claim. The wide product range has been fulfilled with COMPRESSION BALL VALVES and PP COMPRESSION FITTINGS PN10 line. Besides this, IRRIGATION SECTOR is an equally important part of our production. We produce DRIP-LINE under the brand POLIDRIP, as well as FITTINGS AND VALVES FOR DRIP-LINE.

## IRRIGATION SOLUTIONS

Comprehensive solutions for irrigation systems (DESIGN, SUPPLY OF THE EQUIPMENT, IMPLEMENTATION, COMMISSIONING, OPERATION & MANAGEMENT, and TRAINING). Experts from the Poliext team bring the know-how and modern technologies in irrigation systems for orchards, field crops, and protected crops. Our goal is to optimize water, fertilizer, and energy and achieve HIGHER YIELDS and BETTER-QUALITY CROPS. We provide technological solutions to address real agricultural challenges.

# CONTENTS

## FEATURED PRODUCTS 4 - 5

## IRRIGATION SOLUTIONS 6

## PIPES 9 - 17

<b>Drinking water pipes</b>	<b>10 - 11</b>
Drinking water pipes PE100	11
<b>Irrigation pipes</b>	<b>12 - 17</b>
Agricultural pipes	13 - 14
Irrigation LDPE pipes	15
White LDPE Pipes	16
Other irrigation pipes	17
Layflat hoses	17
PVC Microtube	17
Flex pipe for Pop-up	17

## HIGH-PRESSURE FITTINGS 19 - 41

<b>PP Compression fittings PN16</b>	<b>20 - 25</b>
<b>PP Compression fittings PN10</b>	<b>26 - 31</b>
<b>PP Clamp saddles</b>	<b>32 - 34</b>
<b>Threaded fittings</b>	<b>35 - 38</b>
Manifold fittings	39
<b>Layflat fittings</b>	<b>40</b>
<b>Aluminium fittings</b>	<b>41</b>

## DRIPLINE FITTINGS 43 - 57

<b>Drip pipe fittings</b>	<b>44 - 51</b>
Lock type fittings	45 - 46
Quick joints	47 - 48
Barbed fittings	49 - 51
<b>Drip tape fittings</b>	<b>52 - 57</b>
Tape fittings	53 - 54
Tape fittings with ring	55 - 56
Conic tape fittings	57

## VALVES 59 - 73

<b>Low-pressure valves</b>	<b>60 - 66</b>
Cylinder MINI valves	61 - 63
Cylinder valves	64 - 66
<b>High-pressure valves</b>	<b>67 - 70</b>
PP Compression valves	68
PP Stop valves	68
Ball valves	69
Garden valve PN16	69
Pressure regulators	70
Check valve	70
<b>Other valves</b>	<b>71 - 73</b>
Quick coupling valve	71
Air releasing valve	71
Drain valve	71
Plastic vacuum breaker	72
Fertilizing equipment	72
Metallic valves	72
Bermad electric control valves	73

## FILTERS 75 - 79

<b>Plastic filters</b>	<b>76 - 77</b>
Screen filters	76
Disc filters	77
Hydrocyclones	77
<b>Metal filters</b>	<b>78 - 79</b>
AutoFlush® automatic disc filter	78
Automatic double gravel filter	78
Metal scree/disc filter Y	79
Hydrocyclones	79

## MICRO IRRIGATION 81 - 102

<b>PoliDrip driplines</b>	<b>82 - 84</b>
PoliDrip Non-PC	83 - 84
PoliDrip Garden Non-PC	84
PoliDrip PC	85 - 86
PoliDrip PCND	87
PoliDrip Garden PC	87
<b>PoliDrip Light driplines</b>	<b>88 - 91</b>
PoliDrip Non-PC Light	88 - 89
PoliDrip PC Light	90 - 91
<b>Assif AS-PC driplines</b>	<b>92</b>
<b>Drip tapes</b>	<b>93 - 97</b>
PoliTape	94 - 95
PoliFlat	96 - 97
<b>Drip irrigation accessories</b>	<b>98</b>
On-Line Non-PC Drippers	98
On-Line PC Drippers	98
On-Line PCND Drippers	98
Accessories	98
<b>Sprinkler irrigation</b>	<b>99 - 102</b>
Impulse sprinklers	100
Micro irrigation accessories	101
Microsprinklers	102

## GARDEN & LANDSCAPE 103 - 113

<b>Valve boxes</b>	<b>104 - 106</b>
<b>Plastic grass grid</b>	<b>107 - 109</b>
Grass Saver Raster	108
Eco Grass Grid	109
<b>Living green wall</b>	<b>110 - 111</b>
<b>Heliflex home garden</b>	<b>112 - 113</b>

## OTHER 115 - 118

<b>Equipment</b>	116
<b>Tools &amp; Accessories</b>	117
<b>Polyduct shafts and tanks</b>	118

## DIY 119 - 121

<b>PE Pipes small coils</b>	<b>119</b>
<b>PoliTape small package</b>	<b>119</b>
<b>DIY Professional irrigation kits</b>	<b>120 - 121</b>
Garden drip irrigation	120
Vegetable drip irrigation	120
Living Green Wall DIY set	121

# Complete Irrigation Solutions

*Made to fit your needs*

Experts from the Polixt team are bringing the know-how and modern technologies in irrigation systems for orchards, field crops, and protected crops.

Design

Supply of equipment

Implementation

Commissioning

Operation & Management

Training

Turn-Key solutions

We are creating a hydraulic map and irrigation system solution based on relevant information:

- Water source characteristics
- Water and soil analysis
- Climatic characteristics
- Google earth map
- Topographic maps
- Planting plan
- Client requirements

Our goal is to optimize water, fertilizer, energy and achieve a better yield.

# PIPES

---

Variety of Polyethylene (PE) and other pipes for drinking water, irrigation, and telecommunication applications.

Our pipes made from top-quality virgin High-Density Polyethylene are ideal for potable water and high-pressure systems. For irrigation pipes, we use Low-Density Polyethylene which makes them more flexible and suitable for connecting a wide range of offtakes (starters), fittings, and drippers.

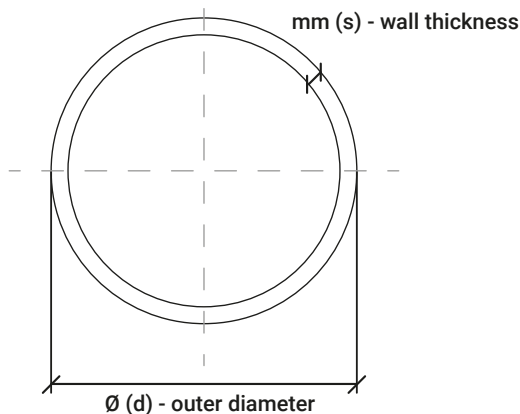

## Drinking water pipes

Made from first-class High-Density Polyethylene (HDPE), which has long-term strength properties (PE100). They are a safe way to transfer potable water. Long molecular chains make them suitable for high-pressure pipelines. They are characterized by a long service life and UV resistance.

PE100 pipes are available in the size Ø20 to Ø400 mm.

### Standard Dimension Ratio $SDR \cong d/s$

**Definition** - The numerical designation of pipe series is a convenient round number. Approximately equal to the dimension ratio of nominal outside diameter and the nominal wall thickness.

#### NOTE

ÉMI and DVGW certificates are valid for Ø20 mm - 225 mm

### Specifications and Technical data

<b>Diameter</b>	20 - 400 mm
<b>Color</b>	Black, with blue stripes
<b>Packaging</b>	50, 100, 200, 300, 500 m rolls, 6 m pipes, or custom made
<b>Operating Pressure</b>	10 – 16 bar
<b>Heat Resistance</b>	-20 – +40°C; however when used over +20°C the lifetime and pressure resistance is decreased <ul style="list-style-type: none"> <li>• Below +4°C becomes more rigid, and could be easily damaged;</li> <li>• Below -5°C is not recommended for installation</li> </ul>
<b>Thermal Dilatation</b>	0.2 mm/m/ °C
<b>Certification</b>	DVGW, ÖNORM, ÉME, UBA and OIB certificates
<b>Standard</b>	ISO 17885, EN 12201
<b>Field Of Use</b>	Cold-water pressure line networking
<b>Methods Of Connection</b>	<ul style="list-style-type: none"> <li>• PP Compression fittings</li> <li>• Butt fusion welding</li> <li>• Electrofusion fittings</li> </ul>

### Features

- Long lifetime (even 50 years when placed in the ground)
- UV resistant
- Accurate design and construction
- Appropriate size trench work, preparation of ballast

## Drinking Water PE100 Pipes

PE100 pipes are the third generation of pipe grade PE. Made from first-class High-Density Polyethylene, providing a safe way to transfer potable water. They are characterized by a long service life and UV resistance.

Connection: PP compression fittings, butt fusion welding, electro-fusion welding, and socket fusion.

# Irrigation Pipes

Irrigation pipes are produced from a softer material for easier installation. High impact resistance and weathering, make it ideal for the most demanding application. Unlike steel, PE Pipes can easily bypass obstacles in their path and withstand movements in the ground around them. The field of use is turf irrigation, open-field irrigation, and greenhouses.

Connection: Mechanical fittings (PP Compression fittings, Clamp saddles, Dripline fittings, Barbed fittings, etc.)

## Features

- Long lifetime
- UV resistant
- Accurate design and construction
- Appropriate size trench work, preparation of ballast

## Irrigation LDPE pipes

Irrigation pipes, produced from low-density polyethylene raw material (LDPE) are used in a wide range of applications, including sprinkler & drip irrigation and agricultural & landscape irrigation systems. Thanks to their high resistance to mechanical stress, they apply to all mechanical fittings, especially for a connector with inserts (PP compression fittings, clamp saddles, dripline fittings, barbed fittings, etc.)

## White LDPE Pipes **NEW**

White LDPE pipes are primarily used in greenhouses since it reflects light, providing plants with enough light to grow adequately. It is used as a supply pipe for online drippers.

White LDPE pipes we **DO NOT** keep on stock.  
For more information contact our sales department

Obtain water temperature

Prevents Algae

UV Resistant

Operating Pressure 6 bar

Multiple diameters

### Features & Benefits

- Reflects light instead of absorbing it
- Maintains water at a temperature below that of a black polyethylene pipe
- Prevents the growth of algae and bacteria
- Triggers less dilatation and contraction than a black pipe
- Slows down the chemical precipitation reaction
- Maximizes light reflection in greenhouses
- Made of solid, durable polyethylene

### NOTE

#### Transport Packaging:

Pallet dimensions - pipe diameters 16, 32 and 40 is 120x120  
- pipe diameters 20 and 25 is 80x150

Pipe diameter 16: Ø62 cm x 15 cm height - 100m roll  
2400m / pallet  
120x120 pallet size: 110 cm height

Pipe diameter 20: Ø80 cm x 13 cm height - 100m roll  
1600m / pallet  
150x80 pallet size: 130 cm height

The flat hose on flexible PVC is impregnated with polyester reinforcement in one layer. The polyester reinforcement is manufactured between 2 layers of PVC with an anti-delamination system and with reinforced traction capacity.

## Advantages:

- Free of industrial waste
- Decreases stretching under pressure
- Anti-delamination
- Perfect for irrigation
- Stretching resistant
- Traction resistant
- Perfect adhesion between layers

ID - Tube inner diameter in mm

Wall - Tube wall thickness in mm

Type of connection: Sprinkler accessories.

Find out more on page **101**

PVC microtubes are used in low-pressure localized irrigation systems, connected to micro-sprinklers and micro-sprayers with the main pipeline, or from drip emitters directly to the plant. Available inside diameters are from 3 mm to 8 mm, and wall thickness from 1 mm to 2.5 mm, depending on the microtube type.

## Group 01070

**FLEX PIPE FOR POP-UP D16 10 BAR**

Type of connection: Elbow for pop-up and Elbow for pop-up (Spiral barb).

Find out more on page **51**

This type of pipe is used to make irrigation with Pop-up sprinkler connections. Flex pipe simplifies sprinkler installation, relocation, replacement, and repair. Provides flexibility for better positioning to the desired location and to get around the obstacles and buffer sprinkler protecting it against damage.

Available packages: 25 m, 50 m, 100 m, and 200 m rolls.

# High Pressure Fittings

Fittings manufactured from high-quality plastic are suitable for setting up the water supply and irrigation systems. Poliext provides the whole range of fittings and adapters for high-pressure applications, specially designed to match the performance of our valves and tubing (compression fittings, clamp saddles, threaded fittings, manifold fittings, lay flat fittings, etc.)

## PP Compression Fittings PN16

PP compression fittings PN16 are designed especially for connection polyethylene (PE) pipes. These fittings are compatible with all PE80 and PE100 pipes, according to EN12201.

Our range of compression fittings allows a fast and secure connection of polyethylene tubing for any industrial, commercial or domestic need. Available in diameter from 16 mm to 110 mm and with a maximum operating pressure of 16 bar.

### Specifications and Technical data

<b>Size</b>	16-110 mm
<b>Nut</b>	Blue Polypropylene (PP)
<b>Clinching Ring</b>	Polyacetal (POM)
<b>Thrust Ring</b>	Special elastomeric nitrile rubber (NBR)
<b>O ring - gasket</b>	Ethylene propylene diene monomer rubber (EPDM)
<b>Body</b>	Black Polypropylene (PP)
<b>Reinforcing metal ring</b>	Galvanized steel
<b>Operating Pressure</b>	16 bar
<b>Design</b>	ISO 17885
<b>Size</b>	ISO 3126
<b>Threads</b>	ISO 7-1
<b>Markings</b>	ISO 17885
<b>Quality Management</b>	ISO 9001
<b>Pipes Suitability</b>	Polyethylene pipe PE80 and PE100
<b>Effect on water quality</b>	According to national regulations
<b>Pull out resistance</b>	ISO 3501
<b>Resistance to internal pressure when subject is bended</b>	ISO 3503, DIN8076
<b>Resistance to internal pressure (1 hour)</b>	ISO 3459, DIN8076
<b>Resistance to internal pressure (100 hours)</b>	ISO13846, ISO 1167, DIN8076

### Features

- Certified by DVGW and produced according to EU norms and standards
- Produced from primer raw material. Certified for drinking/potable water
- Precise threads, according to EU standards
- Excellent long-term pressure resistance
- High-quality O-ring, coated with silicone
- Strong clinching ring
- Female fittings are with reinforcing metal ring
- Fitting nut has 4-6 threads, providing stronger connection and better pull-out characteristics

### NOTE

DVGW, KIWA, UBA, OIB, ÉMI and ITC certificates are valid for Ø20 mm to Ø75 mm

### ASSEMBLING INSTRUCTIONS

#### Assembling instruction for fittings Ø16 - Ø40 mm

Limber up the nut, but do not remove it completely.

Insert the pipe into the fitting. Make sure that the pipe crossed the O ring - gasket.

Fully coil back the nut.

Assembled PP fitting.

#### Assembling instruction for fittings Ø50 - Ø110 mm

Pull up the nut, the clinching ring, the thrust ring, and O-ring on the pipe.

Put together the pipe, O-ring, and thrust ring into the body. Push the pipe until the internal register is inside a fitting. Make sure that O-ring and thrust ring are in their original position.

Pull back the clinching ring to its original position.

Pull back the nut and fully coil it up to the fitting.

#### Proposal for easier installation for fittings Ø90 - Ø110 mm

Pull up the nut, the clinching ring, the thrust ring, and O-ring on the pipe.

Place the pipe into the body of the fitting. O-ring and thrust ring are pushed into place, fully winding the nut.

Uncoil the nut, then stretch the clinching ring and place it into the pipe right next to the thrust ring.

Pull back the clinching ring to its original position.

### IMPORTANT

- The end of the pipe has to be chamfered and cleaned from chips.
- From Ø20 mm to Ø40 mm is enough to coil the nut by hand.
- If the nut is not fixed completely, there can be dripping or flowing at the O ring-gasket or the pressure can set off the pipe from the fitting.
- The threaded end of the PP fitting has to be covered with PTFE (polytetrafluoroethylene) tape or braid.
- The threaded end of PP fitting has to be coiled in completely (useful thread length).
- Above 50 mm diameter, a wrench or tool has to be used to reach the perfect bonding.

- Torque values for tightening nut:

DN	16	20	25	32	40	50	63	75	90	110
Nm	6.5	8	15	18	28	40	65	110	140	240

- Fittings Ø90 - 110 mm:
  - Position the pipe app 5 mm from the internal register, while tightening the nut, it will push together the clinching ring thrust ring, O-ring, and the pipe to the right position.
  - Tighten the nut and make sure that the nut exceeds the last thread of the body, until a 1 - 2 mm gap is left next to the fitting edge.

## PP Compression Fittings PN10

PP Compression fittings PN10 are specially designed for connecting polyethylene (PE) pipes. They are compatible with all pipes according to EN 12201. Available in diameter from 16 mm up to 63 mm and with a maximum operating pressure of 10 bar.

### Specifications and Technical data

Size	16 - 63 mm
Body	Black Polypropylene (PP)
Nut	Green Polypropylene (PP)
Clinching Ring	Polyacetal (POM)
Thrust Ring	Black Polypropylene (PP)
O ring - gasket	Special elastomeric nitrile rubber (NBR)
Operating Pressure	10 bar
Pipe Suitability	Polyethylene (PE) pipe, PE80, and PE100, In accordance with EN 1220
<b>Reference standards</b>	
Design	ISO 17885
Markings	ISO 17885
Size	ISO 3126
Threads	ISO 7-1
Internal pressure resistance (1 hour)	ISO 3485
Pull-out resistance	ISO 3501

### Features

- Top product quality and reliability
- Excellent price-quality ratio
- Produced according to EU standards
- Strong fitting, excellent pressure resistance, and long-life cycle
- Easy assembling and reassembling

## ASSEMBLING INSTRUCTIONS

### Assembling instruction for fittings Ø16 - Ø63 mm

①

Remove the nut and the clinching ring completely from the body of the fitting.

②

The nut and the clinching ring have to be pulled up on the pipe.

③

Insert the pipe into the fitting body and make sure the pipe crossed the O ring - gasket.

④

Pull back the clinching ring to its original position.

⑤

Pull back the nut and fully coil it up to the fitting.

⑥

Assembled fitting.

### IMPORTANT

- The end of the pipe has to be chamfered and cleaned from a chip.
- From Ø16 - Ø40 mm diameter, it is enough to coil the nut by hand.
- If the nut is not fixed completely, there can be dripping or flowing at the O ring-gasket, or the pressure can fire the pipe from the fitting.
- The threaded end of the PP fitting has to be covered with PTFE (polytetrafluoroethylene) tape or braid.
- The threaded end of PP fitting has to be coiled in completely (useful thread length).

### NOTIFICATION

- Any chemicals in the system are in contact with polypropylene (PP) and the rubber gasket (O-ring) of the PP Compression fitting.
- Appropriate tests have to be done to ensure product suitability and safety following all applicable regulations.

## PP Clamp Saddles

PP clamp saddles are the ideal solution for branching from existing pipelines for water and irrigation applications. Maximum operating pressure is from 6 up to 12.5 bar – depending on the diameter of clamp saddles and if clamp saddles have or do not have the reinforcing ring.

### Specifications and Technical Data

Size	20 - 315 mm
Body	Black Polypropylene (PP)
Reinforcing metal ring	Galvanized steel
Bolts (screws) and Nuts	Galvanized steel
O ring - gasket	Special elastomeric nitrile rubber (NBR)
Operating pressure	With ring: 20-63 Ø - 12.5 bar 75-315 Ø - 10 bar Without ring: 20-63 Ø - 10 bar 75-160 Ø - 6 bar
Standard	ISO 13460
Number of bolts	20 - 50 mm (2) 63 - 125 mm (4) 140 - 160 mm (6)

### Features

- Easy to install
- Can be installed on any plastic metric pipework
- Reinforced clamp saddles available
- Resistant to breakage
- Can withstand high impact
- Sturdy construction

**ASSEMBLING INSTRUCTIONS FOR PP CLAMP SADDLES**

Place the O ring-gasket into the slot under the upper part of the clamp saddle and the steel screws into the bottom part.

Place the bottom part of the clamp saddle on the pipe. Make sure the pipe is clean.

Place the upper part of the clamp saddle on the bottom part.

Coil the steel nut up to their male parts.

Pull each screw with a wrench.

Drill the pipe through the threaded part of the clamp saddle.

Completely assembled clamp saddle.

**IMPORTANT**

- When drilling the pipe, avoid causing any damage to the thread.
- Use the largest possible size of the jobber drill.
- During the drilling, a piece of a chip can fall into the pipe, causing occlusion.
- If the screws aren't pulled completely, there can be dripping or flowing at the O-ring gasket.
- The threaded connection of fitting has to be coiled in entirely (useful thread length)
- The externally threaded part of the clamp saddle has to be covered with PTFE (polytetrafluoroethylene) tape or braid.

## Threaded fittings

Threaded fittings refer to pipe fittings connecting pipes by internal or external threads, and their dimensions are at a maximum of 4 inches in most cases. Thread connection is the oldest way that we still use today. Some of the advantages are simple usage, easy installation, the possibility of disconnection, and convenient maintenance.

### Specifications and Technical data

<b>Size</b>	1/4" - 4"
<b>Body</b>	Black Polypropylene (PP)
<b>Operating Pressure</b>	10 bar
<b>Standards</b>	ISO 3458 ISO 7-1

### Features

- Simple usage
- Easy installation
- Able to disconnect
- Convenient maintenance

Operating pressure: 10 bar  
 Body: Black Polypropylene (PP)  
 Union Nut: Black Polypropylene (PP)  
 O-ring: NBR

Mainly used for making manifold connections for landscape and agricultural irrigation systems. Speeds up installation and simplifies maintenance of the system. Union part of Poliext Manifold fitting is fitted with a thicker O-ring to prevent leaks. Teflon is not necessary for union sealing.

The operating pressure is 10 bar.

## Layflat fittings

Range of connectors for layflat hoses, variety of sizes, and types of layflat hoses available which are typically used in the agricultural irrigation sector. For connecting a steel clamp is required. Our layflat hose connectors are durable and provide high quality without leaks and spillages during transference.

### Features

- Durable
- No leaks and spillages during transference
- Range of sizes available

## Aluminum fittings

Used for connecting fire-fighting hoses of different diameters, to fire fittings, and to fire water sources. There are no corners or edges on the surface of the terminal that could cause an accident and cause injury. Can be connected with DIN standard terminals.

MATERIAL: Alloy cast aluminum

# Dripline Fittings

---

Used to join the dripline to the mainline and dripline to each other. Designed to be durable, easy to install, UV-resistant, and to assist in installation and the maintenance of the dripping system.

A wide range of applications is available, like agricultural irrigation, family garden, and greenhouses.

## Drip pipe fittings

A wide range of drip pipe fittings simplifies the installation of an irrigation system. The main advantages are the safety of connections, easy assembly, and reassembly without any tool or additional clamp.

### Features

- Secure and reliable connection
- Simple, dependable, and inexpensive
- Improve the seal and grip for the various grades of tubing
  - Pull-off resistance
  - Blow-off resistance
  - Ease of installation

### Specifications and Technical data

<b>Size</b>	Size 3.5 - 63 mm
<b>Body</b>	Black polyacetal (POM) Black polypropylene (PP)
<b>Operating pressure</b>	3 - 6 bar
<b>Types</b>	<ul style="list-style-type: none"><li>• Lock Type</li><li>• Quick Joint</li><li>• Barbed</li></ul>
<b>Standards</b>	ISO 9261 ISO 7-1

Operating pressure: 6 bar  
 Nut: Black Polypropylene (PP)  
 Grip ring: Polyacetal (POM)  
 Body: Black Polypropylene (PP)

Recommended pipe wall thickness:  
 - 16 mm: 0.8 – 1.1 mm (31 up to 44 mil)  
 - 20 mm: 0.9 – 1.4 mm (35 up to 55 mil)

Recommended for PE pipes, PoliDrip® and PoliDrip® Light

These fittings are recommended for agricultural and landscape irrigation. The redesigned cap makes it fit with the thin-wall pipes and drip tape. Ensures minimum pressure loss in the system parts where it is installed.

The operating pressure is 6 bar. Simple solution provided by wide product range.

**ASSEMBLING INSTRUCTIONS FOR LOCK TYPE FITTINGS**

Separate the grip ring and nut from the body.

Pull the coupling nut up to the end of the pipe.

Push the ribbed end of the grip into the pipe.

Insert threaded part of the body on the free side of the grip ring.

Pull back the nut and coil it completely on the fitting.

Operating pressure: 6 bar  
 Nut: Black Polypropylene (PP)  
 Body: Black Polypropylene (PP)

Recommended pipe wall thickness:  
 - 16 mm: 0.8 – 1.1 mm (31 up to 44 mil)  
 - 20 mm: 0.9 – 1.4 mm (35 up to 55 mil)

Recommended for PE pipes, PoliDrip® and PoliDrip® Light

Safe and fast way of connecting drip irrigation setup using fix grip ring. Quick joint fittings ensure additional protection even on uneven ground. They are specifically used for low-pressure connections. The maximum working pressure is 6 bar. A wide range of quick joints is available. From now on, besides 16 mm, a diameter of 20 mm is also available.

**ASSEMBLING INSTRUCTIONS FOR QUICK JOINTS**

- ① 

Separate the nut from the body.
- ② 

Pull the coupling nut up to the end of the tape.
- ③ 

Insert barbed part of the body on the end of the pipe.
- ④ 

Pull back the nut and coil it completely on the fitting.

Operating pressure: POM - 4 bar  
 Other - 3 bar  
 Body: POM - Polyacetal  
 Other - Black Polypropylene (PP)

Recommended pipe wall thickness:  
 - 16 mm: 0.8 – 1.1 mm (31 up to 44 mil)  
 - 20 mm: 0.9 – 1.4 mm (35 up to 55 mil)

Recommended for PoliDrip® and PoliDrip® Light

Barbed fittings are made from black POM (polyacetal) raw material to reach a sharp barb lip which makes a secure connection that is less likely to leak and slip out. Easy twist-in insertion. No need for glue or clamps for installation. A wide range of shapes and sizes allow you to choose the most suitable product for your application.

Connection fittings for Flex Pipe

**Dripline Accessories**

Accessories used for positioning dripline on the wire or fixing it on the ground.

Supporting Hook

Ground Hook

Support Zip-tie

Find out more on page 116

**ASSEMBLING INSTRUCTIONS FOR BARBED FITTINGS**

1

Cut the pipe perpendicularly. The end of the pipe has to be straight and clean from the chip.

2

Insert the barbed part of the fitting into the pipe. Make sure that the pipe passes the last barbed ring.

3

Assembled fitting on the pipe.

## Drip tape fittings

Drip tape fittings are specifically used for low-pressure connection of drip tapes, with a maximum operating pressure of 3 bar. A simple solution in every situation is provided by the wide product range. Available in diameters of 17 mm and 22 mm.

Ideal for use in irrigation systems both for professional and hobby users.

### Features

- Safe and fast way of connecting drip tape
- Easy handling and assembling
- Protection even on uneven ground
- Fast assembly and reassembly
- Wide product range

### Specifications and Technical data

Size	17 and 22 mm
Body	Black polypropylene (PP)
Nut	Red polypropylene (PP)
Ring	Polyacetal (POM)
Operating pressure	1- 3 bar
Types	Tape fittings Tape fittings with ring Conic tape fittings
Standards	ISO 9261 ISO 7-1

Operating pressure: 3 bar  
 Nut: Red polypropylene (PP)  
 Body: Black Polypropylene (PP)

Recommended pipe wall thickness:  
 - 17 mm: 0.15 - 0.875 mm (6 - 35 mil)  
 - 22 mm: 0.15 - 0.5 mm (6 - 20 mil)

Recommended for all types of drip tape (PoliTape® and PoliFlat®)

Tape fittings secure a safe and fast way of connecting drip tapes. The increased middle part ensures easy handling and assembling and the long grip body helps the tape to be pulled on the fitting easily. The nut gives additional pressure resistance.

**ASSEMBLING INSTRUCTIONS FOR TAPE FITTINGS**

**Offtake 14 and 16 mm**

- Drill the 14 or 16 mm hole on the chosen position in the pipe.
- Place the gasket in the hole.
- Push the offtake part of the fitting through the gasket.
- Screw the nut until you reach the pipe and tighten it by hand.

**Drip tape**

- Coil back the nut on the fitting, as much as possible.
- Pull the drip tape on the fitting. Pay attention that the nut is in its position.
- While holding the drip tape, tighten the nut with the hand. Make sure it is tighten firmly.

Operating pressure: 3 bar  
 Ring: Polyacetal (POM)  
 Body: Black Polypropylene (PP)

Recommended pipe wall thickness:  
 - 17mm: 0.13 - 0.3 mm (5 up to 12 mil)  
 - 22 mm: 0.15 - 0.5 mm (6 - 20 mil)

Recommended only for drip tape with flat emitters (PoliFlat®)

Tape fittings with the ring are for fast and simple connection, ideal for use in irrigation systems for connecting drip tapes. Increased middle part guarantees easy handling and assembling, and a long grip ring helps to pull the tape easily on the fitting. A simple solution for every situation is provided by a wide product range.

**ASSEMBLING INSTRUCTIONS FOR TAPE FITTINGS WITH RING**

①

Pull back the ring on the fitting, as much as possible.

②

Pull the drip tape on the fitting. Pay attention that the ring is in its position.

③

While holding the drip tape, pull the ring with the hand over the tape, as much as possible. Make sure it is tightened firmly.

Conic tape fittings are specifically used to connect drip tapes with layflat hoses in an irrigation system. The quick and easy installation enables fast assembling and reassembling. You only have to push the body of the fitting into the base – no thread and sealing tape required. No need for a special tool or additional clamp.

**ASSEMBLING INSTRUCTIONS FOR CONIC TAPE FITTINGS**

1 Punch the 14 mm hole on the chosen position on the layflat hose.

2 Insert the base through the hole using the Allen (hex) key. Place it inside the hole and turn it until it is fully inside the pipe.

3 While holding the Allen (hex) key in place, tighten the wing nut of the base, firmly by hand.

4 Push the conic part of the fitting into the base. Make sure that it is well fitted.

5 Assembled fitting on the layflat hose.

# Valves

---

Irrigation Valves are used to create various watering zones in an irrigation system. This separation allows different watering devices to be encompassed in a single system. By opening and closing a valve, each zone in your irrigation system can be watered according to the special needs of the zone.

## Low-pressure valves

Low-pressure valves are designed in various types as they regulate and control valve flow by opening, closing, or partially obstructing different passageways of the irrigation system. They enable quick and easy installation of drip lines and drip tapes.

### Features

- Safe and fast way of connecting drip irrigation setup
- Assures additional protection even on uneven ground
- Specifically used for low-pressure connection
- Special cap also makes it fit the thin-wall pipes (35 mil), standard drip lines and PE pipes
- Simple solution in every situation provided by a wide product range

### Specifications and Technical data

Body	Black Polypropylene (PP)
Nut	Black Polypropylene (PP)
Grip ring	Polyacetal (POM)
Handle	Polyacetal (POM)
Operating Pressure	Cylinder MINI valves - 2 bar Cylinder valves - 6 bar
Size	16 – 25 mm
Standards	ISO 9911 ISO 7-1

Operating Pressure: 2 bar  
 Size: 16 – 20 mm  
 Body: Black Polypropylene (PP)  
 Nut: Black Polypropylene (PP)  
 Handle: Polyacetal (POM)

Our new generation of low-pressure valves for irrigation is available with a maximum operating pressure of 2 bars. Cylinder MINI valves represent the best mix of performance and value. A diverse product range makes it ideal for various types of irrigation. Mostly, they are used in open fields and greenhouse irrigation.

**SOON**

Operating pressure: 6 bar  
 Size: 16 – 25 mm  
 Body: Black Polypropylene (PP)  
 Nut: Black Polypropylene (PP)  
 Grip ring: Polyacetal (POM)  
 Handle: Polyacetal (POM)

Low-pressure valves are generally ideal for use in drip irrigation applications (gardens, greenhouses, open field irrigation). Enable setup of drip lines with minimal pressure losses. The operating pressure is max. 6 bar. The large passage hole guarantees minimal load loss in parts of the system where it is installed. The complete range from a diameter of 16 to 25 mm meets all irrigation requirements.

## High pressure valves

High-Pressure valves are used for compression or/and threaded connection which corresponds to the requirements of a water supply system (potable water and irrigation) and pressures typical in these applications. High-Pressure valves are available in various tubing sizes and body designs to satisfy widely varied requirements.

### Features

- Secure and fast connection to the water network
- Suitable for both above-ground and underground use
- Operating pressure 10 bar, PP Stop valve operating pressure 16 bar
- Easy solution thanks to the wide product range

### Specifications and Technical data

Body	Black polypropylene (PP)
Handle	Black or blue polypropylene (PP)
Design	ISO 17885
Size	ISO 3126
Threads	ISO 7-1
Pressure resistance	ISO 9911
<b>In the case of spray-bonded versions:</b>	
Nut	Blue polypropylene (PP)
Clinching ring	Polyacetal (POM)
O-ring	Ethylene propylene diene elastomer
Body	Black polypropylene (PP)
Markings	ISO 17885
Pull-out resistance	ISO 3501

## PP Compression valves PN10

The ball valve connects with the "compression joint method" from compression fittings to reduce the number of connections, combining reliable operation with easy assembling. These valves are valid to be used to conduct water and nutrition fluids. PP Compression ball valves are available in diameter from 20 up to 63 mm. The operating pressure is 10 bar at 20°C (water) engraved on the product.

## PP Stop valve PN16

The plastic (Polypropylene - PP) valve connects with the "compression joint method" on both valve sides, with a maximum operating pressure of 16 bar. It is produced from high-quality UV-resistant raw material. Characterized by easy assembling, which speeds up the installation. It has a wide range of applications, used in potable-water systems and irrigation systems, both agricultural and landscape irrigation. Typical advantages of the plastic body are providing resistance against mechanical stress, corrosion, and limescale deposition.

## Ball valves

A ball valve is a mechanical device that directs, guides, and modulates water flow by opening or closing a ball that is open in the middle of the valve. Turning the handle on the ball valve, it manually opens/closes the port which controls the pressure of the water flow. Durability and perfect closure are what make the ball valve more favorable compared to other types of valves.

## Garden valve PN16

The body is molded from high-impact strength plastic (PP). It is UV, and low-temperature resistant. The inside ball and stem are made of brass. The Garden valve is available with a lever handle or a butterfly handle; the measures of the male thread connection are 1/2", 3/4", and 1". On outlet can be connected metal adaptor or garden quick-release.

**Pressure regulators**

Pressure regulators reduce incoming water pressure to set usable pressure for the drip system. The pressure regulator is used when the incoming pressure is too high for the emitters or fittings. The flow rate of the regulator should be matched with the system. Pressure regulation does not take effect until the minimum specified flow passes through the regulator.

## Other valves

Different types of valves are also available: quick coupling valves, air release valves, drain valves, plastic vacuum breakers, etc. Each of these types has various features and functional capabilities, and some of them are available in different sizes.

### Quick coupling valve

The quick coupling valve is a quick and ground-level water plug, reliable and practical for irrigation and gardening. The material is resistant to weather impacts and mechanical stress. Easy assembling: Open the cover, push the key into the quick coupling valve till the hook snaps in place at the body valve and water delivery starts without leaks and wastes. To remove the key, squeeze the upper part of the hook, so the key will be released and the water delivery stops without spillages.

Group 07520

#### QUICK COUPLING VALVE

#### QUICK COUPLING VALVE KEY

Operating pressure: 8 bar

Code	Size	Bag	Box	Price €	Stock
07510010	M 3/4"	-	120	2.71	✓

### Air releasing valve

Air Release Valves' function is to release air pockets that collect at each high point of a full pressured pipeline. An air release valve can open against internal pressure because the internal lever mechanism multiplies the float force to be greater than the internal pressure.

Group 11060

#### AIR RELEASING VALVE

Code	Size	Bag	Box	Price €	Stock
11060020	1"	-	30	12.55	✓
11060030	2"	-	14	54.18	✓

### Drain valve

Plastic Automatic Drain Valves protect the irrigation system from damage due to freezing by automatically draining the lines when the water is turned off. Install the drain valve at the lowest point of each watering zone.

Group 11090

#### DRAIN VALVE

Code	Size	Bag	Box	Price €	Stock
11090010	3/4"	-	25	8.27	✓

## Plastic vacuum breaker

Manufactured from high-quality raw material. The plastic vacuum breaker offers outstanding features and advantages. It has perfect sealing under considerably low system pressure and high flow capacity. The patented operation, smart design, simplicity, and compactness, shape a highly reliable product. Designed to break the vacuum when the pipe drops below atmospheric conditions. On the subsurface, drip irrigation systems prevent dirt to enter the emitters.

Group 11060

### VACUUM BREAKER

## Metallic valves

Gate valves are widely used for all types of applications and are suitable for both above-ground and underground installation. Gate valves are often used if minimum pressure loss and a free bore are needed. In the fully open condition, a typical gate valve has no obstruction in the flow path resulting in a very low-pressure loss.

Group 07500

# Filters

---

Water filtration is crucial to almost every irrigation system, both agricultural and landscape irrigation. Appropriate filtration can help extend the lifetime and makes maintenance easier for any irrigation system. For drip or micro-sprinkler emitters, filtration is an essential requirement to avoid clogging.

## Plastic Filters

The plastic filters are used for filtration in the irrigation system, effectively eliminating sediment and microorganisms. They can be used alone or for secondary filtration.

We offer screen filters, disc filters, and sand media filters.

### Screen filters

A screen filter is used for water filtration using a screen to separate sand and other fine particles out of water during irrigation. They have high-quality resistance to the most common chemicals. Constructed of UV - a resistant and durable plastic material that withstands the most adverse circumstances. The screen filter cartridge can easily be removed from the filter to be cleaned, making maintenance more manageable.

## Disc filters

The main application of the Disc filter is fine water filtration in irrigation systems. Some of the advantages of Disc filters are three-dimensional filtration, therefore the interval between cleaning is longer, resistance to common agricultural chemical fertilizers, and flushing agents used in the system. Disc filters can partially separate algae developed in the irrigation system.

## Hydrocyclones

Also known as sand separators, the main use of centrifugal filters is the removal of particles such as sand, and other solids from the irrigation water, in other words, it prevents sand from entering the irrigation system. Using hydrocyclones, parts of dirt with a high specific gravity can be filtered out quite effectively. The liquid is admitted tangentially, which results in a centrifugal flow forcing the dirt parts towards the outer side of the filter.

## Metal Filters

Obstruction of sprinklers and drippers is one of the most significant problems encountered in irrigation systems. Filtration is the best protection method against avoiding entrance/obstruction of a dripper, sprinkler, hydrant, and other similar equipment used in the irrigation system by sediments.

Therefore, filtration is the most significant control unit of an irrigation system.

### Autoflush® Automatic Plastic Disc Filters

AutoFlush® Automatic Plastic Disc Filter is constructed by assembling many tiny synthetic discs manufactured from polypropylene material on a filter body with a telescopic structure. When synthetic discs are arranged one on another and are centralized around within a telescopic filter body, the center of discs forms a hollow disc. They are designed to perform a deep filtration based on desired micron level found on both sides of synthetic discs and inter-sectioning of channels designed in a crosswise manner. The most outstanding advantage of AutoFlush® Automatic Plastic Disc filter is that it automatically self cleans the filter when it is obstructed.

Group 08131

### Automatic Double Gravel (Sand-Media) Filters

Gravel filters are designed for filtration of the river, lake, pool water, and water resources containing organic materials such as lichen and alga. The outstanding advantage of the gravel filters against other types is maximum filtration efficiency due to deep filtration. Gravel filters provide ease of use, maximum filtration efficiency, and less maintenance due to their simple structure.

# Micro irrigation

---

The micro-irrigation system is effective in saving water and increasing water use efficiency. It helps reduce water consumption, growth of unwanted plants (weeds), soil erosion, and cost of cultivation. Microirrigation is a low-pressure, low-volume irrigation system suitable for high-return value crops such as fruit and vegetable.

## Driplines

### PoliDrip dripline

### PoliDrip Light dripline

The most suitable living conditions for the plants. The drip irrigation system is the most efficient way to irrigate your tree crops and orchards. Water drips slowly to the plant roots saving water and nutrients. A drip line system also helps conserve water, which is more of a consideration in areas where water supplies might be limited

### Features

- Provides the most suitable life conditions for the plants
- Makes it possible for the water with the nutritive materials to get to the roots of the plants in a short way
- Provides an appropriate proportion of the water and the air in the soil. The ideal circumstances for the development of the plants
- Guarantees considerable quantity of the yield and a better quality besides lower expenses
- Reduces the weeds, and so the costs originating from this
- The simple operation and control of the irrigation system save a lot of time and costs
- Water application efficiency is high if managed correctly
- Fields with irregular shapes are easily accommodated
- Recycled non-potable water can be safely used
- Soil erosion and weed growth is decreased
- Water distribution is highly uniform, controlled by the output of each nozzle
- Fertigation can easily be included with minimal waste of fertilizers
- Foliage remains dry, reducing the risk of disease
- Usually operated at a lower pressure than other types of pressurized irrigation, reducing energy costs
- Dripline irrigation can greatly reduce or eliminate water waste while promoting healthier plant growth

### Specifications and Technical data

Pipe material	Polyethylene (PE) - black / brown
Emitter material	Polyethylene (PE) - gray /blue /green
Operating Pressure	0.4 - 4.5 bar
Package	100 / 300 m
Distance between drippers	Min. 20 cm
Dripper discharge	1 l/h – 2 l/h – 4 l/h
Dripper Type	Non-PC / Pressure Compensated (PC)
Wall thickness	<b>PoliDrip dripline:</b> Ø16 mm: 1.0 - 1.1 mm (44 mil) Ø20 mm: 1.1 - 1.2 mm (47 mil) <b>PoliDrip Light dripline:</b> Ø16 mm: 1.0 - 1.1 mm (35 mil) Ø20 mm: 1.1 - 1.2 mm (40 mil)
Pipe diameter	16 mm / 20 mm
Working terms	<ul style="list-style-type: none"> <li>• Expert planning and installation</li> <li>• Non-return and air valve installation</li> <li>• Physical, biological and chemical filtering (min. 120 mesh)</li> <li>• Fertilization and acid treatment</li> <li>• Regular flushing of the system</li> </ul>

Standard	ISO 9261

## PoliDrip Driplines

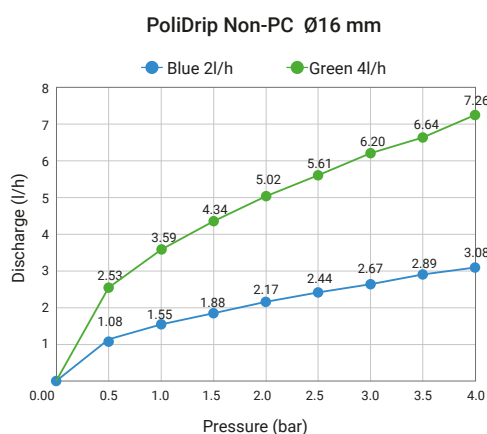

Used to deliver the water directly to the roots of plants. Dripline has emitters placed at intervals along the pipe which correspond with the placement of each plant. This ensures that water is delivered directly to each plant's root zone. This method of irrigation is not only very precise and efficient, but it also saves water because of low water discharge and minimized evaporation loss.

Size: Ø16 and Ø20 mm  
 Operating Pressure: 1.1 - 1.5 bar  
 Wall thickness: Ø16: 1.0 - 1.1 mm  
 Ø20: 1.1 - 1.2 mm

### PoliDrip Non-PC driplines

Non-PC dripline is used for applications when a drip irrigation system is required for orchards, vineyards, and greenhouses with regular plant spacing with NO slope. Built-in Quality and Durability from premium polyethylene and additives for resistance to UV degradation. Comes in various types and sizes 16 and 20 mm in diameter.

### PoliDrip® Non PC

#### Equal dripper distance / Maximum pipe length in meters

Diameter	Discharge	Pressure	25 cm	33 cm	50 cm	60 cm	75 cm	100 cm

**AGTERA Non-PC dripper**

Only in Ø16 mm, 2 l and 4 l dripline

Compact NON-PC dripper with unique clogging resistance, for well water. The Agtera dripper employs an extra-large flow path cross-section, long labyrinth, and elevated filter - agricultural dripper with excellent clogging resistance.

**ADVANTAGES AND BENEFITS**

**Exceptionally Uniform Flow** - Dripper CV of <3% ensures flow uniformity between drip outlets.

**Compact** - long flow path and economical size.

**High Performance** - Longer pipe runs with <0.5 emitting exponents and 2:1 pressure loss to flow loss.

**Design** - The specialized design eliminates labyrinth dead zones to maintain consistent turbulence, reduce the settling of suspended solids and prevents clogging.

**Highly Clog-resistant** - The long labyrinth and large cross-sectional design ensure sedimentation on the labyrinth surface does not clog the emitter.

**Elevated Filter** - The elevated filter draws from water closer to the pipe center, where water travels at high velocity keeping the filter surface clean. The elevated filter entrance inhibits solids from setting on it between flow cycles, regardless of dripper orientation in the pipe.

**Built-in Quality and Durability** - Constructed with 100% premium virgin polyethylene and additives. Resistant to UV, commonly used chemicals and fertilizers.

**Poliext SG Non-PC dripper**

Only in Ø20 mm dripline

- Delivers uniform flow
- Clog-resistant and low maintenance.
- Durable and resistant to UV radiation.
- The flow varies on uneven terrain. Every dripper emits a different quantity of water depending on its location on the drip line.
- Excellent for vineyards and permanent crops that require minimal elevation and pressure variations.
- Excellent for gravity irrigation systems, as they require no pressure to work.

PoliDrip PC driplines

The pressure-compensated dripline is ideal for permanent crops such as vineyards and orchards with the ground with slope and regular plant spacing. PC pressure-compensated drippers deliver a uniform flow rate no matter how difficult topographical or water conditions. This product is produced with a “PC2” dripper, which is characterized by a large turbulent flow path, double filtration inlets, and a wide pressure compensation range. The dual self-flushing mechanism significantly decreases maintenance time.

**PC2 dripper**  
pressure compensated

Flow Rates: 1.2 - 3.9 l/h  
 Flow Rates/Diameter: 16 and 20 mm  
 Dripper Spacings: minimum 20 cm  
 Wall Thickness/mm: Standard 1.0 - 1.1  
 Outlet Type: 4 hole outlet  
 Operating Pressure: 0.5 - 4.5 bar

**Applications**

- Ideal for permanent crops such as vineyards and orchards in undulating or slope terrain
- For on-surface installations

**Features and Benefits**

- Large turbulent flow path, double filtration inlets, and a wide pressure compensation range (0.5 - 4.5 bar)
- Dual Self-Flushing Mechanism flushes at every start-up ensuring reliable operation and less maintenance
- Provides for a high water distribution uniformity, even with significant field elevation changes and in undulating terrain

**Specification**

- Turbulent high-flow, double-entry drippers
- The highest compensation pressure range (0.5 - 4.5 bar) in the industry, delivering optimum performance
- Pressure Compensation with PC2 membrane
- Dual self-flushing mechanism in each start the operation, providing low daily and annual maintenance

**PCND dripper no drain pressure compensated**

Available in 16 mm dripline

Flow Rates: 1.35 - 2.35 l/h  
 Flow Rates/Diameter: 16 and 20 mm  
 Dripper Spacings: 33 cm  
 Operating Pressure: 0.6 - 3.5 bar

No drain pressure compensated dripline is used for applications when a highly reliable and accurate dripper is required (pulse irrigation, subsurface, and highly undulating ground, also ideal for greenhouse applications). In addition to pressure compensating, the dripper seals close if the pressure falls below 0,1 bar to stop water from draining out of the tube and shut off. The No-drain system option provides that the dripline remains full of water between irrigation intervals, ensuring immediate and uniform irrigation along the dripline. Available only in diameter 16 mm.

**APPLICATIONS**

Pulse irrigation, subsurface, and highly undulating ground are ideal for greenhouses.

**FEATURES AND BENEFITS**

In addition to pressure compensating, the dripper seals when the pressure drops below 0.1 bar to stop water from draining out of the tube at shut off.

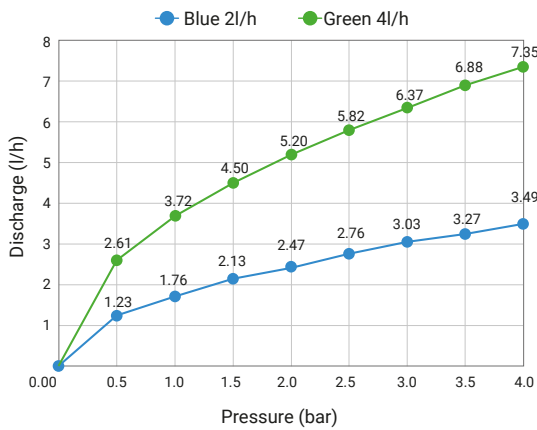

Size: Ø16 and Ø20 mm  
 Operating Pressure: 1.1 – 1.5 bar  
 Wall thickness: Ø16: 0.8 - 0.9 mm  
 Ø20: 0.9 - 1.0 mm

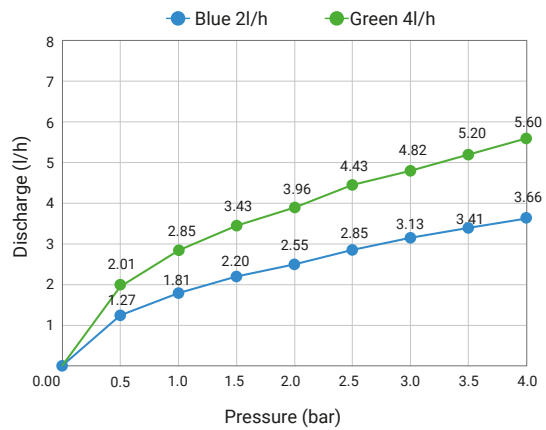

PoliDrip Light Non-PC

Thin-wall Non-PC dripline is used for applications when the drip irrigation system is required for orchards, vineyards, and greenhouses with regular plant spacing with NO slope. Built-in Quality and Durability from premium virgin polyethylene and additives for resistance to UV degradation. Comes in various types and sizes range from diameter 16 and 20 mm.

**NOTE**

- We produce PoliDrip pipes also on special request, with different dripper spacing and coil length.
- For more information please contact our sales department.

**PC2 dripper pressure compensated**

Flow Rates: 1.2 - 3.9 l/h  
 Flow Rates/Diameter: 16 and 20 mm  
 Dripper Spacings: minimum 20 cm  
 Wall Thickness/mm: Standard 0.8 - 1.0  
 Outlet Type: 4 hole outlet  
 Operating Pressure: 2.0 - 4.0 bar

**Applications**

- Ideal for permanent crops such as vineyards and orchards in undulating or slope terrain
- For on-surface installations

**Features and Benefits**

- Large turbulent flow path, double filtration inlets and a wide pressure compensation range (0.5 - 4.5 bar)
- Dual Self-Flushing Mechanism flushes at every start-up ensuring reliable operation and less maintenance
- Provides for a high water distribution uniformity, even with significant field elevation changes and in undulating terrain

**Specification**

- Turbulent high-flow, double-entry drippers
- The highest compensation pressure range (0.5 - 4.5 bar) in the industry, delivering optimum performance
- Pressure Compensation with PC2 membrane
- Dual self-flushing mechanism in each start the operation, providing low daily and annual maintenance

Assif AS-PC driplines

Dripline with pressure compensated, anti-siphon system – prevents suction of sand or soil into the dripper. Wide range of operating pressures for various topographies. Unique and accurate regulating labyrinth mechanism with wide water passages along the labyrinth. Suitable for different water sources and provided with a long-lasting silicone diaphragm. Durable under harsh field conditions and chemical applications. RootGuard® configuration is available for extra protection against root intrusion in SDI (Subsurface Drip Irrigation) systems.

Assif AS-PC dripper anti-siphon pressure compensated

Drip line:	Anti-Siphon PC
Flow Rates:	1.2 / 2.1/ 1.6 l/h
Diameter:	16 mm
Dripper Spacings:	minimum 20 cm
Wall Thickness/mm:	35 mil (0.9 mm)
Operating Pressure:	0.8 - 3.5 bar

RootGuard® configuration is available for extra protection against root intrusion in SDI systems.

FEATURES

- Especially designed for SDI application
- Wide range of operating pressure for various topographies
- Unique and accurate regulating labyrinth mechanism
- Wide water passages along the labyrinth
- Suitable for different water sources
- Long-lasting silicon diaphragm
- Durable under harsh field conditions and chemical applications

APPLICATION

- Row crops
- Orchards
- Turf and landscaping
- Vegetables
- Sugarcane
- Alfalfa
- Industrial crops

## Drip tapes

Thanks to emitters placed close to each other, PoliTape provides the most suitable life condition of the plants by watering the root zone. Allows the water and the nutritive materials to get to the roots of the plants in a short way. Guarantees higher quantity of the yield, simple operation and control of irrigation system, saving a lot of time and costs. The cheapest solution to use in case of water quality is low.

### Features

- Precisely shaped emitters for high uniformity of flow
- The turbulent flow-path design provides a high degree of resistance to clogging
- Available in a wide range of wall thicknesses, outlet spacings and flow rates
- High resistance to tensile and cracking
- Strong material resistance to abrasion reduces land damages
- Thanks to the versatility and reliability it is easy to install and reduces your work time
- The production of the system and its quality is in accordance with ISO 9261.

 Diameter: 16 mm

### PoliTape

**PoliTape®** drip tape with continuous labyrinth provides high resistance to clogging and therefore longer lifetime of the system. The special system provides superior performances and uniformity of emitters. Extrusion technology utilizes high-quality specially developed polymers, renowned for their firmness and flexibility. These polymers were developed especially for use in industrial and agricultural environments. A special system of forming tapes with a constant labyrinth delivers superior performance and uniformity of drippers. The entire production is performed according to standard ISO 9261:2011.

**FILTRATION**

Double-filtration of water through 110 properly positioned points.

**LABYRINTH**

Constant labyrinth of flow control

**WATER OUTPUT**

Micro-precise slit

**FEATURES AND BENEFITS**

- Precisely shaped emitters for high uniformity of flow
- Double water filtration through the 110 properly positioned points
- Micro precise slits eliminates blockages on the startup and prevents root intrusion
- The turbulent flow-path design provides a high degree of resistance to clogging
- Available in a wide range of wall thicknesses, outlet spacings, and flow rates
- Seamless construction for greater reliability
- Visible blue ribbons for better recognition and indicators emitters
- High resistance to tensile and cracking
- Strong material resistance to abrasion reduces land damages
- Thanks to the versatility and reliability it is easy to install and reduces your work time
- The production of the system and its quality is following ISO 9261

**Fittings and valves for driptapes**

• Safe and fast way of connecting drip irrigation setup

• Easy assemble and reassemble, no tool or additional clamp required

• Assure additional protection even on uneven ground

• Specifically used for low-pressure connection

• Tape fittings with the ring can not be used for drip tape with labyrinth (PoliTape).

PoliFlat

**PoliFlat®** is the drip tape model with flat emitters. Emitters with double positioned filtration provide the highest clogging protection. The largest area of filtration on the market is set over the entire length of the emitter. Extrusion technology utilizes high-quality specially developed polymers, renowned for their firmness and flexibility. These polymers were developed especially for use in industrial and agricultural environments. The entire production is performed according to standard EN ISO 9261.

Emitters positioned with double filtration providing maximum protection against clogging. A low coefficient of variation provides high uniformity in the use.

**FEATURES AND BENEFITS**

- Construction without overlap for greater resistance to the pressures of type
- Design and production technologies guarantee a high level of the filter part and a high level of protection against clogging
- Precisely drilled holes using laser technology
- Extremely low coefficient of variation (CV) provides high uniformity in the use of
- High resistance to cracking and stretching
- Visible white lines for better positioning of the setting of a tape
- It is available in different wall thickness, emitter spacing, and flow
- Solid material, resistant to abrasion, reducing land degradation
- Easy installation thanks to the versatility and reliability
- Production and quality control are following the international standard EN ISO 9261:2011

**Fittings and valves for drip tapes**

- Safe and fast way of connecting drip irrigation setup
- Easy assemble and reassemble, no tool or additional clamp required
- Assure additional protection even on uneven ground
- Specifically used for low-pressure connection

FIELD OF USE

- Orchards
- Vineyards
- Greenhouses with irregular plant spacing

On-line drippers used to be mounted on LDPE or Agriculture PE pipes from 16 mm and higher diameter. On-line drippers provide easy installation and are easily mounted by punching a 3 mm hole on the pipe. The minimum filtration capacity of the filter used in the system shall be 130 microns. Drippers are used with 7.0 x 4.0 mm microtube together with microtube fittings, except Medousa drippers, which are used with 5.0 x 3.0 mm microtube.

**Features**

- Ideal for trees and bushes.
- Easy cleaning
- High reliability, precision, and efficiency, minimizing clogging problems

## Sprinkler irrigation

Sprinkler irrigation is a method of applying irrigation water that is similar to natural rainfall. Water is distributed through a system of pipes usually by pumping. It is then sprayed into the air through sprinklers so that it breaks up into small water drops which fall to the ground.

### Features

- Land leveling is not required
- No loss of cultivable area due to channel construction
- Suitable for almost all soil types
- Water-saving irrigation intensity can change by the infiltration capacity of the soil and crop water requirements
- High efficiency due to uniform water distribution  
Water management can adapt to growth stage and conditions
- Possibility of irrigating for other purposes: sprouting, frost protection, or cooling during hot periods
- Lower labor requirements as compared to traditional surface irrigation approach

### Advantages

- Elimination of the channels for conveyance, therefore no conveyance loss
- Suitable to all types of soil except heavy clay
- Suitable for irrigating crops where the plant population per unit area is very high. It is most suitable for oilseeds and other cereal and vegetable crops
- Water saving
- Closer control of water application convenient for giving light and frequent irrigation and higher water application efficiency
- Increase in yield
- Mobility of system
- May also be used for undulating area
- Saves land as no bunds etc. are required
- Influences greater conducive micro-climate
- Areas located at a higher elevation than the source can be irrigated
- Possibility of using soluble fertilizers and chemicals
- Less problem of clogging of sprinkler nozzles due to sediment-laden water

### Impulse sprinklers

Impulse Sprinkler is a type of irrigation in which the sprinkler head is driven in a circular motion by the force of the outgoing water. The impulse sprinkler's long spray radius and uniform water distribution re-create the effect of natural rainfall.

- Impulse sprinkler
- Impulse sprinkler nozzles

Microsprinklers

Microsprinkler irrigation saves water because of the high application efficiency and high-water distribution uniformity with small waste. Microsprinklers and microsprayers provide low precipitation rates, allowing longer watering time. Field of applications: nursery, greenhouses, orchards, and vegetables.

# Garden

---

Garden irrigation is a watering system that is used in residential and commercial landscaping. The primary function of a garden and landscape irrigation system is to ensure that water is spread regularly and evenly throughout any given landscape.

## Valve boxes

The Valve box is specifically designed to create a safe and secure environment for the valves, fittings, wires, and manifolds, in other words, the components of an irrigation system. It protects against vandalism, the elements, and damage due to mowers, string trimmers.

### Features

- Easy access to buried irrigation control valves
- Protects essential components of your irrigation system
- Durable Construction
- Lightweight and easy handling
- Fast, trouble-free, and cost-saving installations

## Plastic Grass Grid

A modern and stable solution for covering the ground in both domestic and commercial applications. It strengthens the soil, protecting against erosion. Plastic grids provide exceptional ground reinforcement as well as water drainage in a variety of applications. It does not crack, it is permeable, and will not dry out grass or cause flooding.

### Features

- Form and size allows for independent installation
- Can be set up easily, its setting up does not need any special instrument
- Durable, eco friendly, and easy maintenance
- Its environment protective material is UV and heat resistant
- Unique interlocking click system

### Application

- Driveway grids & gravel parking
- Grass or gravel car parks
- Driveways and residential lawn
- Grass stabilization
- Lawn protection

### Filling

- Soil
- Grass seed
- Gravel
- Stones

## Installation Guide for gravel filling

<p>Form the shape of the area using a rope. Take out the soil to the appropriate depth and level the the base keeping a 1.5% slope.</p>	<p>Position a geotextile to prevent the mixing of layers and support the substructure.</p>	<p>Apply the self-binding aggregate and compress it mechanically.</p>	<p>Apply a base layer and even out with a traversing rule.</p>
<p>Begin in the corner and install grids in rows. Keep a minimum 5 cm gap between the edge and grid cover. The locking system indicates the installation direction.</p>	<p>Merge the grids with the locking system and press down strongly (use a foot or rubber mallet). If required, cut the grids with an angle grinder or a blade to fit.</p>	<p>Level out the grid surface using a compactor or a garden roller.</p>	<p>Fill the grids with the gravel and compress it mechanically.</p>

### IMPORTANT:

The technical description is not specific! Please, contact us before installation.

### NOTE:

When filling with stones, it is recommended to place the geotextile under the turf to prevent weed growth.

## Grass Saver Raster

Grass Saver Raster is a plastic covering element that can be connected. Modern, stable floor grids for those who are looking for an alternative to concrete or asphalt for their property or public areas. This is a particularly individual form of floor fastening that is used in many different everyday applications - Parking spaces, Logistics & Storage space, Erosion control, Driveways & Paths, Home & Garden, Forest & Agriculture and Equestrian sports.

	Not filled – 1000 kN/m <sup>2</sup> , 100 t/m

### SUBSTRUCTURE LAYERS

## SOON Eco Grass Grid

**Material:** 100% polyethylene that can be recycled

**Contact surface area:** 3400 cm<sup>2</sup>/m<sup>2</sup>

The Eco Grass Grid can be filled with soil and grassed as the cell structure and open base promotes unrestricted root growth. The Eco Grass Grid can also be filled with gravel providing a high-quality decorative look. The cell structure retains the gravel and prevents loss or gravel displacements. Perfect for laying strengthened new lawns, just interlock the grids, fill with soil and sow the seeds.

### ECO Grass Grid T50-5

Height - 50 mm

13010030	500x500x50	5 mm

### ECO Grass Grid T50-4

Height - 50 mm

Code	Size (LxWxH)	Wall Thickness
13010040	500x500x50	4 mm

#### Features

- Made from 100% recycled materials
- UV stable / resistant
- Easy to install
- Pre-assembled EcoRasters can be taken directly off pallets, in layers, and easily be laid on the ground
- Fixing points for connecting to the ground
- T-shaped locking system provides firm and secure connection

### SUBSTRUCTURE LAYERS

## Living Green wall

Prefabricated panels with pots for forming amazing green walls. By simply setting the sets from our offer, with a little creativity, you can easily have a unique look on your walls. We offer a larger and smaller set of amazing LIVING GREEN WALLS.

- Minimal effort of placing and removing pots
- Simple maintenance - irrigation from the top is completely satisfying
- Beautiful visual experience

#### 5 pot set (small) - Soil Planting

Panel WxH: 16x80cm  
Pot LxWxH: 20x15x11cm  
Pot reservoir: 150cc  
Pot volume: 1000cc  
Set weigh (with plants): 8-13kg

8 sets ~ 1m<sup>2</sup>

#### 3 pot set (large) - Soil Planting

Panel WxH: 26x80cm  
Pot LxWxH: 30x24x21cm  
Pot reservoir: 700cc  
Pot volume: 8000cc  
Set weigh (with plants): 21-25kg

5 sets ~ 1m<sup>2</sup>

#### Features

- Frames click together in multiple orientations
- Adjustable frames up to 90 degrees
- Built-in reservoir overflow system in each pot
- Simple to install
- Light yet sturdy construction
- Good drainage
- Automatic irrigation system
- Economical water consumption and no waste
- Space-saving
- Interchangeable plant pots

0-90°

Modular

## BLOCKAGE FREE DRAINAGE

### Built-in reservoir overflow system

Poliext Green Walls are a revolutionary modular solution, with a built-in **Flow Through** and **Overflow reservoir** system in each pot, preventing overwatering of the plant and root rotting.

- The Flow Through system** - Water drips on the topmost row and moves down to each succeeding row to ensure all plants are appropriately watered.
- The Overflow Reservoir system** - collects excess water. Excess water flows through the openings in the bottom of the pot.

Our recommendation is not to close the openings at the bottom of the pot because excess water drains through the openings preserving the plant healthy.

All you need to do is water the top planter, and excess water automatically makes its way down to the lower planting pots.

## Installation Guide

-  1. Position the panel and mark mounting holes
-  2. Drill holes
-  3. Attach the frame with screws and dowels
-  4. First, place the tube through the pot liner, and put them together into the pot
-  5. Add plants to pots
-  6. Hang the pots on the frame

## Water Timing & Control

Add an irrigation timer for even more convenience. Poliext offers easy to operate and very reliable irrigation timers.

### IMPORTANT

Do not seal the holes at the bottom of the pot. Sealing holes blocks water drainage and can lead to root rotting.

When adding soil to the pots, make sure it doesn't get into the irrigation pipes.

### NOTE

Please check the bearing capacity of the surface you are mounting the Living Green Wall, according to the weight of the pots when they are full. When covering larger areas with the Living Green Wall modules substructure is necessary.

Place drip tray for excess water accumulation and drainage under the Green Wall panels, especially for indoor installations.

For the best results, please, consult your horticulture specialists.

## Heliflex home garden

To make your garden flowers happy give them water with pipes and hoses from Heliflex.

Heliflex, when your house and garden are our concern!

Without proper tools and equipment irrigation system would not function properly. Polixt offers a range of specialized irrigation tools, equipment, and accessories to help you do the job right.

Our products will support you to install, maintain and repair irrigation system a whole lot easier.

## Equipment

Different equipment available depending on the kind of system and the type of installation. Often, installations have a similar structure, so most additional irrigation requirements can be solved with a relatively small range of equipment – ground hooks, supporting hooks, support zip-tie, silicon wire connection, PVC tying string, marking table, rubber sealing rings, etc.

The general terms of sale hereby stated apply to all orders received by the Seller after the issue of this pricelist and will be considered as accepted in full upon placement of order by the CUSTOMER.

#### PRICES

- Prices are Ex-Works (INCOTERMS: EXW) and include standard packing costs.
- Special packing if requested upon placement of order and accepted by the Seller will be charged extra.
- Prices are subject to variation without any prior notice.
- Minimum order value is 500 EUR in case of export. Any order placed under given value 15 EUR management fee is charged.
- Our sales prices fixed in EUR, but if the CUSTOMER requests HUF price can be used based on daily exchange rate of Hungarian National Bank published on the date when invoice created.

#### PRODUCT ORDERS

- Orders must be placed electronically or in writing according to codes and descriptions as per pricelist.
- Quantities must be adjusted to standard packing.
- Orders can be dispatched in successive stages.
- The CUSTOMER does not have the right to cancel entirely or partially the order.

#### PRODUCT MODIFICATION

The Seller reserves the right to make alterations that are considered necessary for the best operation of products as referred to in a pricelist without adversely affecting the use and initial function. This does not constitute reason for the CUSTOMER to withdraw orders or to claim compensations or reimbursements of any kind.

#### DELIVERY OF PRODUCTS

- Products are sold Ex-Works (INCOTERMS: EXW).
- If means of transport are not clearly indicated by the CUSTOMER, delivery will be carried out in cost-saving way and according to the best knowledge, as much as possible.
- Products are transported at the CUSTOMER own risk BECAUSE the products are sold EXW.
- Insurance is provided only if requested and is charged to the CUSTOMER.
- The Seller does not have any responsibility for damages incurred during transport.
- The CUSTOMER is obligated to inform immediately the freight company upon receipt of products for shortages or damages of the goods and to state if such has occurred on the bill of delivery.
- The Seller reserves the right to suspend the delivery of products if at any time receives information that the CUSTOMER is in a financial position that would create any doubt as to his solvency or the CUSTOMER has delayed payments from previous supply of products. The CUSTOMER informed in writing about any suspend the Seller make in case of delivery.

#### GUARANTEE

- Warranty is limited to repair and/or replacement of our products whose failure is due to material or manufacturing defects attributable to Poliext. Warranty is limited to the repair or replacement of defective products with the complete exclusion of any other responsibility, particularly with the exclusion of any compensation or acknowledgement of the damage caused by the use of our products.
- The warranty does not cover the following defects:
  - If the consumer does not comply with the rules on use, transport, storage, installation and operation.
  - The presence of traces of exposure to substances aggressive to the materials of the product.
  - The presence of damage caused by fire, natural disaster, force majeure.
  - Damage caused by incorrect actions of the consumer.
- The Seller, who undertakes the warranty in order to fulfill the contract, or have legal duty to provide warranty, is obligated to take responsibility for incorrect fulfillment, during the warranty period, based on the warranty statement or the terms of law. The Seller is exempt from warranty, if proved that the cause of fault aroused after fulfillment.
- The warranty claim can be validated during warranty period. In case if the Seller does not fulfill the warranty obligation – on time - despite the CUSTOMER notice, the Warranty Claim can be endorsed in the court of law for 3 months passed the warranty period. The omission of the warranty term results forfeitures of its right.
- In case of incorrect fulfillment based on the edict of 151/2003. (IX.22.) for each durable consumer goods, the Seller is obligated to warranty, if the CUSTOMER is qualified as consumer according to Civil Code. The obligated warranty valid for the goods listed in the attachment of the above-mentioned edict.

• Based on the edict 151/2003. (IX.22.) about the detailed norms of contracts between the consumer / CUSTOMER and Companies, the warranty period is divided according to the value:

- o If the selling price is between 10.000 HUF and 100.000 HUF, warranty period is 1 year.
- o If the selling price is between 100.000 HUF and 250.000 HUF, warranty period is 2 years.
- o If the selling price is above 250.000 HUF, warranty period is 3 years.

• The rules of edict 151/2003. (IX.22.) should be used for contracts between the consumer/ CUSTOMER and the Seller.

- For the goods turned over by us, we undertake 1 year warranty based on Hungarian law, except all the Pedrollo pumps, which warranty is indicated by the producer.
- The warranty lost its validity in case if the CUSTOMER did not use the product as intended.

#### CLAIMS

- The CUSTOMER must check the received goods. If the claim is not justified, the costs of diagnostics and examination of the product are paid by the CUSTOMER.
- All claims must be submitted electronically or in writing within 7 days from receipt of products or defects discovered.
- No claim will be accepted for goods which have not been paid.

#### RETURNED PRODUCTS

- Claims for return of merchandise should be made within 7 days from delivery date.
- No returns will be accepted without any prior notice electronically or in writing, and above all firstly approved by the Seller.
- Returned merchandise should be perfectly packed and freight prepared.
- Returns of special orders with special characteristics are not accepted.
- Credit notes issued shall be deducted from following invoices.

#### OWNERSHIP

Delivered products remain the Seller's property until they are fully paid.

#### PAYMENTS

- In no case as well as for no reason, the CUSTOMER cannot postpone payment beyond the agreed terms of payment according to the relevant issued invoices.
- In case of delayed payment, the legal current interest rate will be charged as defined in Civil Code.

#### COMPETENT COURT

- The Seller/ service body intend to settle disputes by peaceful negotiation procedure based on signed contract. If the Seller/ service body and the CUSTOMER failed to negotiate peacefully, and still have legal disputes or to any future disputes arising out of a particular legal relationship - based on transaction value - Kecskeméti District Court will have jurisdiction of the district court for any disputes and Kecskeméti Court of Justice exclusive jurisdiction of the general court for all disputes.
- The jurisdiction stipulated by the parties does not affect the right of the CUSTOMER who are consumers according to the Civil Code, in case of claims arising out of a contractual relationship with the Seller/service body, the CUSTOMER/ consumer has the right to settle disputes to competent court of the CUSTOMER'S residence or commorancy.
- In case of any issue arise regarding text of General Terms of Sale because of the understanding of Hungarian and English version, always Hungarian version is the standard to be used.
- Legal relationship is according to Hungarian Law.

#### VALIDITY AND ACCEPTANCE

- These conditions are to be considered valid and applicable and accepted by the CUSTOMER.
- This pricelist is subject to change without prior notice and fully replaces all previous versions.

*The dimensions shown in the catalogue may change without notice as a result of technical updating. We do not take responsibility for any omissions that might occur as a result of typing or printing errors.*

Kecskemét is situated near the middle of highway M5, which connects the Hungary's Nord and South.

The shortest way to reach Matko is following Exit 91 to KecskemétDél (Kecskemét-South). Afterward the subway No. 54 should be chosen by turning left to Soltvadkert. Then a white POLIEXT sign must be noticed on the right side of the road. At this point, you have to leave road 54 by turning left. You should drive straight till the POLIEXT Company's facility is seen on the left side. Following our map, from Exit 91 to Poliext Company, you have to drive 5,5 km.
