ROTARY CULTIVATOR FOR HOME USE

Ideal for home users with small gardens and allotments requiring periodic soil preparation for sowing, even in particularly difficult conditions.

The rotor turns in the opposite direction to the direction of rotation of the wheels, thus giving the operator the maximum control of the cultivator and significantly reducing transmitted vibration levels.

Main features:

- 50 cm wide counter-rotating rotor assembly to facilitate work operations.
- Rugged oil-bath gearbox with aluminium case and gears with worm screw to ensure the maximum working life.
- Vertically adjustable handlebars so the machine can be adapted to suite the operator's posture.
- Gearbox with reverse to facilitate manoeuvres, especially on sloping terrain.
- On/off control integrated in the handgrip along with the accelerator lever for maximum accessibility and convenience.
- Front ballast installed as standard to improve machine stability during use.
- Adjustable rotor to control the working depth, with 6 different settings.

Fuel supply	
Engine make/model	EMAK K 700 H OHV
Displacement	182 cm ³
Power	5.4 HP
Engine	Emak
Starting	recoil start
Transmission	with gears in oil bath
Gearbox	2-speed (1 forward + 1 reverse)
Speed (Km/h)	1 st : 1.62 - 1 st R: 2.95
Handlebar	height adjustable
Wheels	4.00-8"
Rotor	50 cm, counter-rotating
Working depth adjustment	as standard with 6 settings
Weight (complete machine)	75 Kg
