

HAND CART

The Hansa Handcart is purpose-built to pair with the Hansa C7 chipper, allowing you to collect mulch directly from the chute — reducing mess, saving time, and eliminating double handling. It comes complete with a fitted cover to contain mulch while chipping, keeping your workspace clean and efficient.

HAND CART

Compact by design and narrow enough to fit through standard gateways, the Handcart is ideal for tight garden paths and storage spaces. It can be used as a handcart for easy manoeuvring or quickly set up as a trailer to tow behind a ride-on mower, offering flexibility for different tasks and terrains.

With a 150 kg capacity, removable front and back doors for effortless tipping, and solid rubber-spoked wheels for smooth travel over uneven ground, it's perfect for transporting firewood, branches, compost, garden tools, or pot plants. Durable steel panels and plywood doors ensure long-lasting performance, and it stores upright to save space.

A smart, space-efficient solution for mulch collection and all-purpose garden hauling.

Specification
