

Remove the moss in your lawn with MO Bacter

moss

MO Bacter is an organic based lawn feed which will feed your lawn up to 100 days. **MO Bacter** has an indirect action against moss and reduces the tendency for reinfection.

MO Bacter eliminates the need to scarify out moss and will not turn the moss black.

After application the moss will die and turn light brown in about 14-21 days. There is NO NEED TO RAKE OUT dead moss, it disappears into the thatch layer where the millions of bacteria contained in **MO Bacter** digest it, turning it into healthy plant food and revitalising your lawn.

So, Scarifying out your moss in now a thing of the past.

20 Kg treats up to 200m²
Depending on local conditions

Recovery restores your lawn from root to leaf!

harmed lawns

Restores stressed lawns!

Unlike many other fertilisers **Recovery** starts at the root. It contains Humifirst which is a unique additive that actively stimulates root growth.

A revitalised root system sustains the grass plant and revitalises its growth systems.

Recovery enables:

- the grass plant to take in the nutrients it requires from the soil and fertiliser
- it ensures stronger grass plants that out compete moss and weeds
- produces healthy grass leaves which can compete against diseases

By using **Recovery** your lawn will flourish and give you that velvet finish you have always wanted.

Recovery ... the ideal Pre-seeder !

Use **Recovery** as a pre-seeder 7 days before laying turf or sowing a new lawn. After 2 months re-apply **Recovery** at the rate of 50 – 100 g/m² to encourage even stronger and healthier roots for a better lawn.

Result

a strong and healthy lawn

BIO-Lime for lawns

BIO-Lime: As lawns grow they take up nutrients from the soil which leads to a reduction in the pH level. At the same time acid rain falls on the lawn increasing its acidity. Acid soils are an unhealthy environment for lawns and create the ideal environment for moss to encroach and thrive.

BIO-Lime is the ideal autumn, winter and spring fertiliser for combating a low pH and will result in a stronger lawn with less chance of moss encroachment. **BIO-Lime** contains bacteria and eats the thatch within the lawn. It also contains magnesium which strengthens the grass and gives it that strong green colour during the winter when it might otherwise go yellow.

Earthway Even Spread 2000 rotary	23 Twice	26 Twice	26 Once	23 Twice	23 once	23 Twice	23 Once
Vitax Precision drop spreader	9 twice	10 Twice	10 once	9 Twice	9 Once	9 Twice	9 Once

When more than one application is made it is best to apply the second spreading at 90 degrees to the first. These spreader settings are for guidance only. Some spreaders are more accurate than others so for this reason we always suggest that you check the delivery rate before applying the fertiliser.
