

VIANO AUTUMN TREATMENT 6-6-16 (+2MgO) + Humifirst

→ SPECIFICATIONS

RATE	50-100g/sqm (see detail below)
CONTENT	10kg net, 20 kg net
NUMBER / PALET	33x10kg / 39x20kg
FORM	Crumbs RC
WHEN TO USE	J F M A M J J A S O N D

→ DESCRIPTION

Viano Autumn Treatment is an organic based fertiliser for application in colder periods (autumn). Contains extra magnesium for green colours through autumn and wintertime. Can be used till the end of the growseason, together with mechanical care. Less risk of leaching. Application of this fertiliser results in a stronger turf with better condition for next spring. With the presence of Humifirst (humic acids) the uptake of the nutrients is optimised. This results in an increased efficiency of the fertiliser due to a better root development.

→ GUARANTEES

Compound organic based NPK fertiliser containing magnesium 6-6-16 (+2MgO) with humic acids

6 % total nitrogen (N), of which

3,0 % organic nitrogen derived from feather meal, meat and bonemeal and cocoa shells

3,0 % urea nitrogen

6 % total phosphorus pentoxide (P₂O₅)

16 % potassium oxide (K₂O) soluble in water

2 % total magnesium oxide (MgO)

25 % organic matter derived from feather meal, meat and bonemeal and cocoa shells

Contains animal by-products, Cat II

→ APPLICATIONS & RATES PER M²

PERIOD	CONSTRUCTION OF LAWN	MAINTENANCE OF LAWN	PREFERED TEMP.
SPRING	-	100g (for K-needing crops, N-rich soils)	8-12°C
AUTUMN	50-100g from august	100g from september	8-12°C

After treatment, wait 5-7 days before starting to cut or walk on the grasses.

Fertilising is possible immediately after mowing the grass. In dry periods (1week without rain) watering is recommended.

→ PHYSICAL CHARACTERISTICS

- easy to use – dustpoor crumbs
- hygienic in use
- to spread by hand or with any kind of (centrifugal and drop) spreader
- density ca. 0,7kg / dm³
- MSDS available on demand

→ REMARKS

Product contains Humifirst !

Humifirst is a mixture of humic acids (*) and fulvo components (= an organic acid that is present in the soil and responsible for the transport of metal ions, it is a very important part of humus (organic material)) which makes the uptake of nutrients by plant roots more efficient. Therefore there is less need in numbers of fertilisation.

(*) Humic acids are 100 % natural substances derived from organic Leonardite layers (coal)in the soil. They are responsible for a better aeration of the soil, less leaching of nitrate, better availability of nutrients, better root formation and higher productivity in crops.

Product can be used in spring !

This formula is also applicable in spring on soils with too much nitrogen or incrops (tuberous crops, ornamental crops) with a high k-need.
